

# HOW TO APPLY SUNCATCHER

## YOU WILL NEED

## INSTRUCTIONS TO MAKE THE BEST RAINBOWS

Note: Like most stickers, your rainbow suncatcher has a strong adhesive and is not intended to be reused/repositioned. Some do have success though! If there is any residue left on the window, basic rubbing alcohol should easily remove it. HAPPY RAINBOWS!

## SKETCH YOUR NEXT

1/8" minimum between design & sticker edge  
transparent background  
3" minimum size

## DOODLE YOUR IDEA HERE

A large dotted grid area for sketching a design for a sticker.

## ARTWORK FILE GUIDELINES

For best results, create artwork using a vector program like Adobe Illustrator and convert all text to outlines. If you are not able to create original vector art, here are the raster file guidelines.

**RESOLUTION:** Minimum of 300 DPI (preferably 600 DPI).

**BACKGROUND:** Must have a transparent (clear) background so that the material can make rain bows.

**SIZE:** Design at 100% of printed size or larger. Must be at least 3 inches.

**NO BLEEDS:** There must be at least 1/8" of space between design and end of sticker.

**FILE FORMAT:** For raster image files we recommend .PNG, .PSD, or .TIFF (avoid JPG or GIF).

Need suggestions or feedback?

Send your idea or sketch to [artwork@brandingideas.com](mailto:artwork@brandingideas.com) for a complimentary art review.
