ADVANCED COMPANY STORE

Advanced Company Store Features

Built to manage the most demanding Company Store requirements, a Bright Sites Advanced Store is a perfect fit when you need a modern and professional storefront loaded with powerful features in the backend.

Access Control & Permission

Seamlessly control what your shoppers can and cannot experience by setting user and group permissions on storefront access, categories, products, price tiers, logos, payment methods, shipping methods, and administrative access.

Inventory Management

Keep track of all products in your store, including in-house and dropship products. Choose to display the actual stock or generic messaging on the storefront. Low and negative inventory notifications will alert you when it's time to restock.

Advanced Payment Methods

Help manage your company's spending in the store with advanced payment methods such as Points, Coupons, Gift Certificates, and Account Balances.

Advanced Checkout

Streamline the checkout process by choosing to hide fields that are unnecessary for the shopper to fill out, creating a one-click checkout experience.
